

Adding a new database to an existing installation

Produmex Manufacturing is a legacy product and Boyum IT Solutions no longer sells new installations for it.

1. Assign the Produmex Manufacturing Add-On to the database.
2. Start the add-on and run the database setup. When working on a MS SQL environment, create a database backup before starting the database upgrade.
3. Open Produmex Service Manager. Click the Setup Companies button and add the database. Click the Companies button and enable the company.
4. Run the configurator for Produmex PDC. On the General tab, select the database from the list of databases and click OK.
