PDC Custom printing

Import the report

location.

In order to print a report with Produmex PDC, import it into SBO or place it to a folder that Produmex Service Broker can access.

×

Import the report into SAP Business One with the Report and Layout Import Wizard.

Browse the report then select 'Inventory' > 'Inventory Reports' as the destination

To see the details of the report, open the Report and Layout Manager and select the report from the Inventory Reports. The report ID will identify the report in the user queries.

×

Example - Print product label

1. Add Print button

Open the Customization Fields table via: Tools > User Defined Windows > BXPCUSTFD -Customization Fields. For more information about the Customization Fields user table please see: Create custom field

Add the following to the Product Batch number screen:

Field Name	Field Type	Label	Screen	Module	Visible	Protected
Print	Button	Print	ProductBatchNumbersAdvScreen	BXPPSMobilePDC	Yes	No
SSCC	String	SSCC	ProductsAdvScreen	BXPPSMobilePDC	No	Yes

A Makita					
	/MSMF (PMX_BUDTOSH2) - John Doe				12/12/17 03:52 PM
Server: 17.09.19004.18920 Client: 17.09.19004		Product Ba	tch Numbers		* ①
Production Order	#136 pMP1101 (Main pro	oduct)			UoM g
Operation	136-1 (OPP1 - Operation)				
Item	pMP1101 (Main product)		SSCC	00000000000004251	F11 F12
Batch Number		F12	Batch Number		F12 (2000)
Quantity		5	[Best Before]		12/30/99 🚟
Detab Number				Datch Muscher	[Dert Defeer]
Batch Number	SSCC	Quantity	[Total Quantity]	Batch Number	[Best Before]
17170093	00000000000004251	5	5		12/30/1899 12:00:00 AM ▲
Quantity Rejected Quantity	5 g Of 0 g Of	5 g 0 g			
Done	Cancel Rejected	P Weigh	Print		Delete [≈]

2. Create user query

Add the custom queries with the Query Manager. For more information about PDC custom queries please see: Create a SAP user query.

The first query is *BXPPSMobilePDC_ProductsAdvScreen_ButtonSerialBatch_click*. Example query:

```
SELECT $[TextSSCC] AS 'SSCC'
```

This query fills the SSCC user field with the SSCC selected on the screen when the Serial/Batch button is pressed. As the SSCC field is protected, the field value can be used in custom queries for events of the next screen.

The name of the second query is the Produmex PDC event name on button click. In this example the user query name will be: *BXPPSMobilePDC_ProductBatchNumbersAdvScreen_Print_click*

SQL

SELECT

```
'C:\Produmex\Reports\Label.rpt' "PrintLayout$",
$[CurrentPDCBooking.ProductCode] "Print_ItemCode",
$[CurrentPDCBooking.ProductName] "Print_Item_ItemName",
'' "Print_SerialNumber",
$[TextBatch] "Print_BatchNumber",
$[TextBatch] "Print_BestBeforeDate",
$[TextBestBefore] "Print_Quantity",
$[TextSSCC] "Print_SSCC",
'PDFCreator' "PrintPrinter$",
```

'Document PRINTING' "Message\$", 'I' "MessageType\$"

HANA

SELECT

```
'RCRI0012' "PrintLayout$",
$[CurrentPDCBooking.ProductCode] "Print_ItemCode",
$[CurrentPDCBooking.ProductName] "Print_Item_ItemName",
' "Print_SerialNumber",
$[TextBatch] "Print_BatchNumber",
$[TextBestBefore] "Print_BestBeforeDate",
$[TextBatchQuantity] "Print_Quantity",
$[TextSSCC] "Print_SSCC",
'PDFCreator' "PrintPrinter$",
'Document PRINTING' "Message$", 'I' "MessageType$"
FROM DUMMY
```

The user query does the following:

Sets the parameters of the selected report to the values entered on the screen and sends it to the defined printer. Then displays the 'Document printing' message. The user query must contain every report parameter with the Print_ prefix. In the example the report has the following parameters:

- ItemCode
- Item_ItemName
- BatchNumber
- BestBeforeDate
- SerialNumber
- PrintQuantity
- SSCC

Replace the **PrintLayout\$** value with the Report ID (in the HANA example the report ID is *RCR10012*). It is also possible to specify a report that is not imported into SBO. In this case add the report file path (in the SQL example it is *C:\Produmex\Reports\Label.rpt*).

Replace the **PrintPrinter\$** value with your printer name. In the example the printer name is

PDFCreator.
