Set up Password Protected Login for Produmex PDC

Produmex Manufacturing is a legacy product and Boyum IT Solutions no longer sells new installations for it.

Add a new PDC Password user field to the Employee Master Data table.

Set the password on this field.

Open Produmex Manufacturing settings. Set the new user field as the 'Employee Card Code Field' on the PDC tab.

Enable the 'Login is Password protected' setting on the Thin Client 2 tab.

In order to login on the terminal, the employee has to enter the password instead of the employee number.
