3.3. Server Module

The Produmex Service Broker can work together with different Produmex add-ons. In order to do it, it uses the dlls of the given add-on. You need to install these dlls with the server installer which has a name like this: Produmex*ADD-ON NAME*_ServerSetup_*version nbr*_ *SBO Version*_*Database server type*.*32/64 bit installers*.zip.

The add-on and the server dlls must be for the same version. If you use different versions, error messages may appear. You simply have to start the installer and it will automatically copy the dlls and then restart the service broker service. You can check the installed modules in the Service Manager. For more information please see: Configuring Produmex Service Broker
