Produmex WMS 2020.12

Produmex download page
Download version 2020.12

Tested SAP B1 versions

- SAP B1 9.3 PL13 32-bit MSSQL 2017
- SAP B1 9.3 PL13 64-bit HANA 1.00.122.22
- SAP B1 10.0 PL2 64-bit MSSQL 2017
- SAP B1 10.0 PL2 64-bit HANA 2.00.044.00

Note: Older and newer SAP Business One versions usually also work, but have not been specifically tested in this version.

Do not use SBO10 PL3 (FP2008) or PL4 (FP2011) including any of their hotfixes with Produmex WMS.

If you are about to upgrade SAP Business One to a higher PL than we have tested Produmex WMS on, make sure that you always test your Produmex WMS processes in a test SAP environment before you perform the SAP PL upgrade on the live environment. For more information click here.

DB version: 722

DB Branch version: 0

Required Add-On Loader version: 20

Produmex User Warehouses UDT

- The data in the User Code field can be 25 characters long.
- Documentation

Picking Flow

- When performing the picking process it is possible to scan both master SSCCs and child SSCCs on the Scan a master/child SSCC screen of the Mobile Client. It is also possible to scan multiple batches from a master SSCC.
- Documentation

Filter Bars on Mobile Client

- Filters bars are available on different screens of the Mobile Client. The user can use the filter bars on screens where the user was supposed to select from the displayed list previously.
- Documentation listing the screens with the filter bar

Filter Bars on Batch Selection Screen

- In the batch selection screen, which is used in many flows, we added an extra flavour: the ability to read GS1 barcodes and recognise the AI lot number. This will make the job of selecting a batch much easier for any customer that uses GS1. Instead of typing a long or complicated batch code, simply scanning the GS1 label of that batch will be enough. WMS will recognise it is a GS1 code and will look for the AI that tells it what lot this is. If the scanner is configured to issue ENTER as a suffix when reading barcodes, then WMS will automatically select the correct batch and move to the next screen, therefore saving time during picking by having less need for interaction with the operator.

Performance

- Packing and shipping process: query view optimization

Additional documentation

- B1UP Integration - Deep Linking Functionalities
- Register the Produmex add-on - The documentation contains updated screenshots of windows with the Boyum IT logo.
- Reports tab - The CR Connection Name field has been removed from the Reports tab in the Organizational Structure.
- Item Master Data - The main screen of the Item Master Data window has been updated.
- Mobile Client - Mobile Client documentation has been moved to the Configuration Guide.

Bug fixes

Ticket	Description
N/A	WMS managed setting - stock inconsistency caused by Inventory Transfer/Goods Receipt
