2025/08/09 00:07 1/5 Produmex WMS 2021.12

Produmex WMS 2021.12

Produmex download page Download version 2021.12

Tested SAP Business One versions

- SAP B1 9.3 PL13 64-bit HANA 1.00.122.22
- SAP B1 10.0 FP2108 HF1 64-bit MSSQL 2017
- SAP B1 10.0 FP2108 HF1 64-bit HANA 2.00.044.00

Note: Older and newer SAP Business One versions usually also work, but have not been specifically tested in this version.

Make sure that you do not use SBO10 PL3 (FP2008) or PL4 (FP2011) including any of their hotfixes with Produmex WMS. If you are about to upgrade SAP Business One to a higher PL than we have tested Produmex WMS on, make sure that you always test your Produmex WMS processes in a test SAP environment before you perform the SAP PL upgrade on the live environment. For more information click here.

Produmex WMS does not support SAP B1 FP2111 due to an issue with crystal reports.

DB version: 747

DB Branch version: 1

Required Add-On Loader version: 21

Quality of life features

• 1. Put Away Strategy:

The Put Away Strategy uses the PutAwayDestinationLocationHookScript hook flow that can be customized so that the system allows for scanning or selecting only the defined destination locations during the Put Away Flow. From product version 2021.12:

• The system displays the default location on the Scan a Destination Location screen during the Put Away Flow. The default location is the first location returned from the stored procedure.

See documentation here.

• 2. Item Master Data - UoM:

In the Item Master Data window the Purchasing tab has the Purchasing UoM Code setting and the Sales tab has the Sales UoM Code setting. From product version 2021.12:

- If you open the UoM code list of the settings and remove the same UoM from both lists, the system automatically removes the UoM from the Produmex tab > Attributes tab > Packaging Type Code list.
- If you add the UoM to any of the UoM code list again, the system automatically adds the UoM to the Packaging Type Code list of the Attributes tab.
- Click Refresh and the changes are reflected on the Attributes tab.
- See documentation here.

• 3. Import Tool:

Import location attributes:

You can import location attributes with the tool through CSV files. Inheritance applies to location attribute import.

- The imported location attribute types and their values are automatically inherited from the main zone to sub-zones and bin locations and from sub-zones to bin locations. When a sub-zone or bin location inherits location attribute values, the system allows for selecting a different location attribute value later on.
- Template: ImportLocationAttributes

• Import movable locations:

You can import movable locations with the tool through CSV files. Template: ImportMoveableLocation

• Layout changes:

All elements can be imported with the General Import function (see General Import drop-down menu) except route templates.

See documentation here.

• 4. ASN Reception - Supplier reference number:

- While importing the ASN file with the Interfacing Tool, the system identifies the supplier reference number in the CSV file.
- The column name in the CSV file is: SupplierRefNo
- Adding the column name to the CSV file is optional.
- The Supplier Ref. No. column has been added to the Open ASN Lines window. When the ASN file is imported, the Open ASN Lines window displays the supplier reference number.
- When the items are received in the Open ASN Lines window or during the ASN Reception Flow, the Vendor Ref. No. field of the Good Receipt PO document is filled in with the imported reference number.
- See documentation here.

• 5. Choosing printer on Mobile Client:

- The Ask operator to choose printer in the mobile client? setting has been added to the Print Events tab of the Organizational Structure.
 - If the setting is enabled, the system displays the Select a Printer screen on the Mobile Client and lists the printers available in the warehouse where the Mobile Client is set.
 - If the setting is not enabled, the system uses the default printer.
- See documentation here.

6. Checks Flow - printing:

2025/08/09 00:07 3/5 Produmex WMS 2021.12

- During the Checks Flow it is possible to print item labels and logistic labels on the following screens: Items on Location, Items on SSCC, Details Item in Stock
- Used print event to print logictic unit labels: 700 WHS: created LU
- See documentation here.

• 7. Put away move order generation:

- The Put away for receive from warehouse generator has been added to Produmex WMS with the Put away generation setting.
- In the drop-down menu of the setting the following three options are available:
 - Do not generate: The system does not generate put away move orders when finishing the Receive from WHS Flow.
 - Generate: The system generates put away move orders when finishing the Receive from WHS Flow. The generated logistic unit can be selected during the Put Away Flow.
 - Generate full pallet: The system generates put away move orders when finishing the Receive from WHS Flow. The generated logistic unit is a full pallet and it can be selected during the Put Away Flow.
 - See documentation here and here.

• 8. Picking alternate stock from bulk locations:

- The Allow alternate stock to pick from bulk locations? (Y/N) setting has been added to the picklist controller: All, except Ad Hoc picking settings.
- By default, the setting is enabled and it makes it possible to pick alternate stock from bulk locations on the Mobile Client.
- See documentation here.

Additional changes

CSV Custom Header

 The field of CSV Custom Header setting is filled in with the default column names and a drop-down menu has been added to show the list of columns together. See documentation here.

· Ask for Reprint? setting

• Organizational Structure > Print Events: The Ask for Reprint? setting has been renamed to Ask operator for reprint in the mobile client?. See documentation here.

Translation

• Polish translation (5) has been added. See the list of available translations here.

Bug fixes

Ticket	Description
N/A	Production receipt - Maximum quantity calculation with more than 100% tolerance
140275	Error while sales return "The maximum quantity is 0. This is not allowed"
	Picking for Production: removing the SSCC
151380	Archiving database stopped due to error: The DELETE statement conflicted with the REFERENCE constraint
152179	Can't receive open PO lines, error 3000005 No open PO lines found
152200	Container management: Modified quantity gets reset after adding new line and lines disappeared after adding a new container with modified quantity
152279	PDMX attributes not prompting in Receive From Whse workflow
152546	Maximum quantity for put away order is incorrect

Archiving tool WMS does not work: The query processor ran out of internal resources and could not produce a query plan 2021.12.03 Wrong SQL date converstion during Database upgrade: For Finnish regional settings, 153489 Produme x WMS did not handle datetime fields well because the database manager always expects a colon to be a time separator, but the Finnish specialty is the dot separator. 153504 Cannot pack grouped items in Packing Flow Production Order inventory locking for components are incorrect 153578 Production Order inventory locking for components are incorrect 153578 Production Order inventory locking for components are incorrect 154318 Proposal Creation via Notification Listener Rounds of the Ordered Quantity 154685 ShipToCode is not filled on Delivery with more than one base sales order 154916 Unable to perform move to location LOST in stock report in SAP 154929 Unable to see "inventory transfer request" picklists when additional remarks are added 15509.
