# 1. Scanning a barcode used for multiple items

With Produmex Scan it is possible to scan a barcode used for multiple items on the following screens:

- Create Delivery Lines screen
- Create Goods Receipt PO Lines screen
- Goods Issue Lines screen
- Goods Receipt Lines screen
- Goods Receipt PO Lines screen
- Inventory Counting Quantities screen
- Issue for Production Lines screen
- Quick Inventory Counting Quantities screen
- Return Components Lines screen
- Sales Issue Lines screen
- Sales Return Lines screen
- Transfer Stock Request Line screen
- Transfer Stocks screen

When a barcode used for multiple items is scanned, Produmex Scan lists all the items that have the scanned barcode on the *Item Selection* screen.

After selecting the necessary item, tap the `Choose` button and the system navigates back to the previous screen.

Example: Scanning a barcode used for multiple items on the *Goods Receipt PO* screen

Note: If Produmex WMS and Produmex Scan are installed on the same company database, Produmex Scan cannot use the same barcode for multiple items as Produmex WMS does not support it.
