Produmex Scan How-to Guides >

How to Perform a Version Upgrade

Please always check the release notes of the new version before starting the upgrade, because it might contains important information regarding the upgrade.

1. Produmex Scan Add-on

The steps of a version upgrade for the Produmex Scan add-on are identical to a new installation.

If you are upgrading from a version higher than 17.05, it is not required to uninstall the current version before starting the upgrade.

When the add-on is started the first time after the upgrade, the database setup will run.
Please note: In order to run the database setup, a database backup that was created within an hour is required on an MSSQL environment.

2. Produmex Service Broker

3. Server Module

4. Produmex Scan client

The steps of the version upgrade for the Scan Client are identical to a new installation. If you are upgrading from a version higher than 17.05, only uninstall the current Produmex Scan version if based on the settings of the operating system, the installation process requires it.
