

### 6.4.2.2. Document lines

On this screen you can select the lines you want to put on the proposal. By clicking the Generate proposal button, the proposals will be created for the selected document lines (except for production orders, see section [Pick List for Production](#)).

**Picklist proposal manager**

Dock: Loading Dock 1

Buttons: OK, Cancel, Generate pick list proposal

#### Dock

Select a dock for the proposal. Every 'Loading' dock from the warehouse is listed in alphabetical order.

When no dock is selected, the system will use the first loading dock it finds.

#### Grid

In the grid user can select all the lines he wants to put on a pick list proposal. The displayed data and the sorting of the lines depend on the settings of the [Picklist proposal manager screen controller](#).

#### Generate proposal

When pressing this button, the pick list proposal(s) will be created for the selected line(s).

In case no lines was selected, the 'No rows selected' message is shown.

If the [Pick List Proposal Generator](#) extension is *PickListProposalGenerator - Generates picklist proposals*, then only lines belonging to the same order are grouped onto a single pick list proposal.

If the [Pick List Proposal Generator](#) extension is *PickListProposalGenerator - Generates picklist proposals grouped by customer-address*, then the system groups order lines that belong to the same customer and address onto a single proposal.

The system allocates stock in the same order as the document lines are displayed on the Pick List Proposal Generator grid.

After the pick list proposals are created, the list of created proposals is shown on the [Generated pick list proposals](#) screen. If only one proposal is created, then the generated pick list proposal opens. It is possible that no or only a partial proposal can be made for certain sales order lines. Those lines are displayed on the [No proposals made for sales documents](#) screen.

Click on the  icon on the Menu Bar to refresh the screen.
