6.9. Free stock screen

This screen uses the view PMX_FREE_STOCK. This view gets the real free stock.

For some document types there are additional filters:

Sales delivery or sales invoice

- Quality status that is allowed for shipping or shipping under quarantine
- Stock not on a 'disallowed location'
    - The list of disallowed locations can be retrieved from the view PMX_DISALLOWED_LOCATIONS_FOR_PICKING

Issue for production

- Quality status that is allowed for production

When this screen appears a user can select lines, if needed adjust quantities, and press the button 'OK' to add the stock to the document line.

Please note that there has to be a line selected when pressing 'OK'
