

Generate documentation tool

Use the 'Generate documentation' tool to export the structure of Produmex related database tables, indexes and user defined fields into a html file.

Go to the installation folder: Produmex > Produmex Tools and run the *Produmex.Sbo.Logex.Tools.GenerateDocs.exe* file. Make sure that you run it in Administrator mode.

Check the connection string on the screen and adjust it if necessary in the configuration file of the tool: *Produmex.Sbo.Logex.Tools.GenerateDocs.exe.config*.

Click on the 'SAP tables doc' button to start the export.

The tool exports the following:

1. If a table name contains the 'PMX_' or the '@PMX_' prefix, but does not contain the 'PMX_ADDON' alias, then the tool exports the following for that table:
 - table name
 - column name
 - data type
 - character maximum length
 - numeric precision
 - numeric scale
 - is nullable value (Y/N)
 - column default value
 - primary key
2. If the name of a database index contains the 'PMX_' prefix, the tool exports the following for that index:
 - table name
 - index name
 - type description
 - is primary key value (Y/N)
 - is unique value (Y/N)
 - is unique constraint (Y/N)
 - key ordinal
 - column name
 - is included column (Y/N)
3. If the name of a user defined field contains the 'PMX_' prefix, the tool exports the following for that user defined field:
 - table name
 - column name
 - data type
 - is nullable value (Y/N)
 - character maximum length
 - numeric precision
 - numeric scale
 - description

- type ID
- edit type
- edit size
- default value
- index ID
- field value
- field value description

The html file is exported to the folder of the Generate Doc tool.
