☐ Do not lock stock on picking (Pick lists can be created even if no stock is available)  
☐ Allow over picking  
☐ Count colli after picking

Ok Cancel Close

Make sure the IP address or host name of the server where the PMX License Server is running is filled in, add-on clients will require this to be able to connect.

You can do this initially on the SBO license server itself because the add-on will try to connect locally if this field is empty.

If it is not possible to run the add-on on the machine running the PMX License Server, you will have to enter this information in the database, after creating the company element. Table "PMX\_OSCO", field "SboLicenseServerAddress": only enter the IP address or host name, no port or other information is allowed.
