

1. Introduction

This document describes the Produmex Suite Installer tool, which allows for the complete installation and configuration of Produmex WMS with the following components:

- Produmex Tools
- Produmex License server
- Produmex Mobile Client (Fat Client with scanner or touchscreen modes)
- Produmex SB1 Notification listener: This is a tool (service) to perform certain actions that are triggered by adding, updating and deleting data in SAP B1.
- Produmex ScaleComm: This is a service that can be used to integrate with scales.

Note: The Produmex WMS add-on is registered and installed like a regular SAP add-on, however, it uses an add-on loader to upload the files to the database.
