3.3.3. Enable the Notification Listener stored procedure

After the Notification Listener configuration is done you need to enable the stored procedures in the stored procedure of SAP named "PMX_TransactionNotification".

This step is only necessary if you intend to use the SB1 Notification Listener.

- To do this open "SQL Server Management Studio" and connect to your database server.
- Expand the "Databases" folder and locate the **PMX database** (not the Company database) to which you want to apply the Produmex Add-on.
- Open this database directory and open the "Programmability\Stored Procedures" subdirectory.
- Locate the "dbo.PMX_SP_TransactionNotificationQueue" stored procedure, right-click it and select "Modify".

Locate the "Produmex SboNotification Queue Code" at the end of this stored procedure (see illustration below)

Copy the "Produmex SboNotification Queue Code".
This code should now be pasted in the "PMX_SP_TransactionNotification" stored procedure, in the **Company database**. Modify this stored procedure in the same way you modified the PMX_SP_TransactionNotificationQueue

Paste the "Produmex SboNotification Queue Code" at the end of it, right after the code you have copied for the Produmex Addon stored procedure (see "Enable the standard PMX stored procedure").

Afterwards you need to uncomment the SP by clicking the "uncomment" button in SQL management studio.
The end result should look like this:

After these modifications. Execute the PMX_SP_TransactionNotification stored procedure.
