About Produmex WMS

> **Produmex WMS for SAP Business One extends the standard functionality of SAP Business One** with functions supporting shopfloor operations in the area of production, packaging, inventory management and logistics (inbound, picking, shipping).

Produmex WMS consists of three parts:

1. Extending of the existing SAP Business One functions
For example articles and users.

2. New Office functions
An administrative Produmex module offering new office functions for defining the organizational structure of a company and streamlining the operational processes of goods receipt, put away, production, packaging, picking, shipping, etc.

These functions are grouped under the Produmex tab in the main menu of SAP Business One and they are also available via Modules > Produmex.

3. Functions supporting the shopfloor operations

The functions are vailable on the shopfloor with the Produmex Mobile Client (scanner and touchscreen modes). With the application operators can execute production, packaging and logistics operations and transfer the required information transparently to SAP Business One. Produmex WMS also provides connections to data capture (barcode) and print devices (label and document printers).
