

### 2.3.12. Link packline to zone table (PMX\_LPLZ)

Defines the zone linked to pack lines. This is use on the 'Consolidated packing' flow.

The pick list destination location should be on that zone. Also the available stock to pack needs to be stored on that zone.

The level of the zone is 1. This means that the zone you define here needs to be the direct zone of the location.

**Name**

The code of the user.

**Code of the pack line**

The code of the pack line, as define in the organizational structure.

**Code of the zone**

The code of the zone, as define in the organizational structure.
