

## 3.2. Production order header

### **Produmex production status**

Next to the status of SAP, there is the Produmex production status.

*Possible values: Planned, On hold, Started, Closed*

### **Production step list**

Next to the item to produce, the user can select a steplist.

The requirements to select a steplist:

- One or more steplists for the item to produce needs to be configured
- The production type needs to be 'Special'

When a step list is selected, a list of components is created according to the selected steplist.

### **Production line**

Next to the warehouse, the user can select the production line where this production order needs to be produced. Only the production lines in the warehouse are shown.
