

## 6.4.2. Pick list proposal manager

The pick list proposal manager is available through the menu:  
Produmex → Inventory → Picklist proposal manager

It allows the user to create pick list proposals based on document **lines**. The list of document lines can be filtered through the selection criteria screen.

### 6.4.2.1. Selection criteria

This is used to filter the document lines. Only the fields 'Document type' and 'Warehouse' are mandatory. The other selection criteria are optional.

#### **Document type**

The document type.  
This field is mandatory.  
Possible values:

- Sales
- Transfer
- Production (Only if the 'Create proposal for picking?' option is enabled on the [Picking for production controller](#).)

#### **Warehouse**

The warehouse.  
This field is mandatory.

#### **Customer**

The from - to customer.

#### **Item**

The from - to item.

#### **Item Group**

The item group.

#### **Due date**

The due date.

The filter will get all documents for this due date.

## 6.4.2.2. Document lines

On this screen you can select the lines you want to put on the proposal. When you click the **Generate proposal** button, the proposals are created for the selected document lines (except for production orders, see [Pick List for Production](#)).

### **Dock**

Select a dock for the proposal. Every loading dock from the warehouse is listed in an alphabetical order.

When no dock is selected, the system uses the first loading dock it finds.

### **Grid**

In the grid you can select all the lines you want to put on a picklist proposal. The displayed data and the sorting of the lines depend on the settings of the [Picklist proposal manager screen controller](#).

### **Generate proposal**

When you click this button, the picklist proposals are created for the selected line(s).

If the [PickList Proposal Generator](#) extension is *PickListProposalGenerator - Generates picklist proposals*, only lines belonging to the same order are grouped to a single picklist proposal.

If the [Picklist Proposal Generator](#) extension is *PickListProposalGenerator - Generates picklist proposals grouped by customer-address*, the system groups order lines that belong to the same customer and address onto a single proposal.

The system allocates stock in the same order as the document lines are displayed on the Picklist Proposal Generator grid.

After the picklist proposals are created, the list of created proposals is shown on the [Generated picklist proposals](#) screen. If only one proposal is created, the generated picklist proposal opens. It is possible that no or only a partial proposal can be made for certain sales order lines. Those lines are displayed on the [No proposals made for sales documents](#) screen.

Click the  icon on the Menu Bar to refresh the screen.

For more information see [Group Picklist Proposals](#).
