

15.2.12. Put away - Production

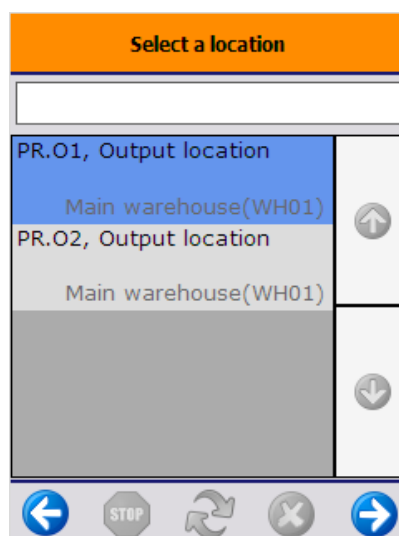

The [Put away for production generator](#) controls the creation of the put away orders. When the standard Produmex WMS product is used, a put away order is created after the (by-) product is produced onto a logistic unit. No production put away order is generated when producing without an SSCC.

To start the flow, select the *Put away option* from the Production main menu.

15.2.12.1. Select the source location

Every location that set as an output location of a production line is listed from the warehouses assigned to the thin client.

15.2.12.2. Scan an SSCC

On the next screen every SSCC that belongs to an open production put away order for the location is listed. Scan the SSCC to move.

15.2.12.3. Scan destination location

Then scan the destination location. It is also possible to select the destination location from a list.

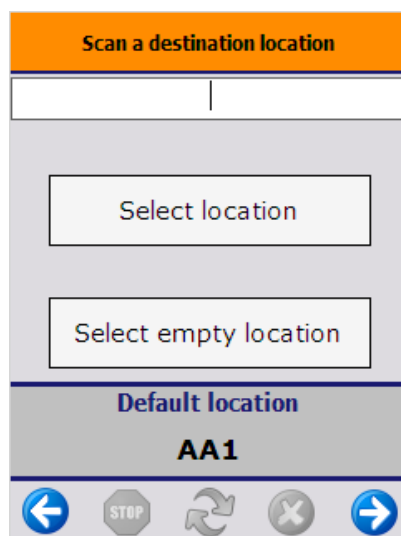

- Press the 'Select location' button to see the list of active locations in the warehouse of the selected output location.
- Press the 'Select empty location' button to see the list of every empty active location from the warehouse of the selected output location.

On the bottom of the screen the Default location is displayed.

When the location suggestion is enabled for the warehouse, the *Default location* is the first suggested location calculated based on the logic described in [Location suggestions](#).

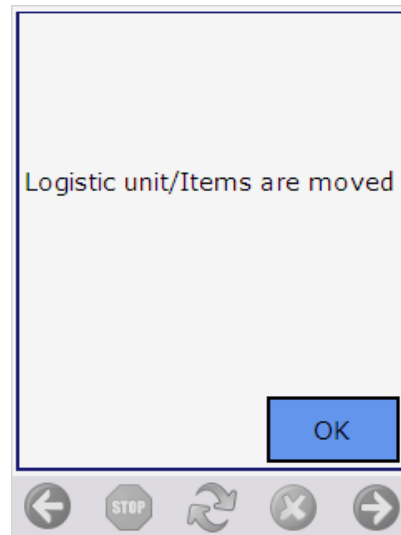

Note: When we use the suggested location functionality in the reception flow (receiving items to a location instead of a dock) and the system cannot find a suitable location for the item, it automatically receives the item to the dock.

When the location suggestion is not enabled for the warehouse, the *Default location* is the standard location set for the given warehouse on the [Produmex Inventory tab](#) of the Item Master Data of the item. If the items to move have different standard location set for the warehouse, no default location is displayed.

15.2.12.4. Logistic unit is moved

After the destination location is selected, the SSCC is moved to that location. The 'Logistic unit/Items are moved' message is displayed on the scanner. Press 'OK' to acknowledge the message. The system returns to the 'Scan an SSCC' screen.
