

6.8. Stock selector

On some screens of SAP it will be possible to use the stock selector screen to easily select the Produmex stock. This screen will fill in the needed data into the UDF's on the document line.

Supported documents:

- Purchase return
- Sales delivery
- A/R invoice
- Goods issue
- Production issue

When an item is entered, the user can press the 'Select stock' button.
On the stock selection screen the user can select 1 or more lines he wants to add.
Quantities can be changed.

Please note that you need to select at least 1 line to proceed.

The stock lines shown in the editor are the free stock for that item. It does not take in account allocated stock for the base order of the document.
