

### 3.1. Warehouse settings

On the warehouse level the following settings can be defined:

#### **Warehouse**

This is the link between the warehouse defined in Produmex and the warehouse in SAP Business One (Cfr. Administration → Setup → Inventory → Warehouses.)

Each SAP warehouse can only be linked once in Produmex warehouses.

#### **Stor. Loc. logistic carriers**

The location in the warehouse where the logistic carriers are located (*in case you have indicated at the company level that logistic carriers have to be stored at one location per warehouse*).

This location needs to be a pick location!

#### **Stor. Loc. returnable items**

The storage location for the returnable items. This is used when inventory returnable items are used.

#### **Location 'Lost and Found'**

The 'Lost and Found' location for that warehouse. All item differences counted during cycle counting (*indirect cycle counting*) will be moved to the Lost and found location in case this is set up on the [CycleCountController](#).

Stock on storage locations set for Lost and found, logistic carriers, ... are not taken in account to create pick list (proposals).

### ***Use location suggestions?***

Set whether location suggestions will be used for move in or to this warehouse. This is used in the [Location Suggestions](#) functionality.
