

28. Capture weight during reception

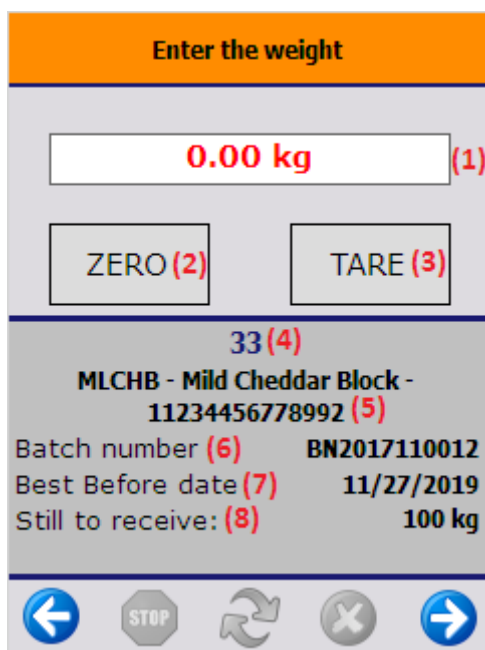

If the 'Weight Capture from Scale Needed?' option is enabled for the item on the [Produmex Purchase tab](#) of the Item Master Data, the quantity of the item must be added by weighing.

The quantity of the items managed by serial numbers cannot be added by weighing.

Define a scale under the reception dock in the Organizational Structure. For more information about how to define a scale please see: [Scale](#)

In order to weight a catch weight item during the reception, set the 'Uom to use for purchase' option to "Weight (UOM2)" or "Pieces and weight" on the [Produmex Catch weigh tab](#) of the Item Master Data.

Please note: Make sure that conversions between the units of measurements are set up correctly on the Units of Measure - Setup (OUOM) SBO standard table.

On the 'Enter the weight' screen the following information is displayed:

1. The measured weight. The UoM is the UoM defined for the scale. The number of decimals displayed depends on the scale accuracy.
2. If the scale has a defined zero command, the Zero button is displayed.
3. If the scale has a defined tare command, the Tare button is displayed.
4. Purchase order number
5. Item code - Description - Barcode
6. Batch number
7. Best before date
8. Open quantity from the purchase order.

If the item is not a catch weight item, the received quantity will be the weighed quantity in the inventory UoM.

If the item is a catch weight item, the weighed quantity will be the received weight in the second UoM of the item.
