## SSCC on label not in stock

### Issue

When receiving items on the scanner, the system will book the receipt in one time for all registered logistic units. But the system cannot print the logistic labels at the end, because then it is not clear for what physical logistic unit the label is printed. (If 10 logistic units are received, it would mean that the system prints out 10 SSCC labels at the end)

This is why the SSCC label is printed after the logistic carrier is registered, but before the receipt is booked into the system. If now the receipt fails for some reason, you have logistic units with SSCC labels, but they are not in stock. When scanning these SSCC's, the system will throw an error.

### Solution

The user needs to redo the receipt. The labels that have been printed by the system can be used to scan when creating the delivery.
