

# 4.4.1. Inventory

## 4.4.1.1. Check and Remove lockings from Items

You can pull up an inventory report for this particular item. Then you select the line of the item and select 'Locking' -> 'View', on the bottom left. There you can see the document number and document type that is locking this item. If you close this document, the stock will be released again.

## 4.4.1.2. The Storage Location code is not filled in

Error 50003: The storage location code is not filled in or does not exist in the organizational structure

This can happen on a stock transition document (goods receipt, stock transfer, delivery etc...) within a Produmex managed warehouse. When the warehouse is managed by produmex, all the PMX fields need to be filled in on those documents.

Necessary PMX fields are:

- Storage Location
- BBD
- Quality Status
- PMX Quantity

## 4.4.1.3. SSCC on label not in stock

### Issue

When receiving items on the scanner, the system will book the receipt in one time for all registered

logistic units.

But the system cannot print the logistic labels at the end, because then it is not clear for what physical logistic unit the label is printed. *(If 10 logistic units are received, it would mean that the system prints out 10 SSCC labels at the end)*

This is why the SSCC label is printed after the logistic carrier is registered, but before the receipt is booked into the system.

If now the receipt fails for some reason, you have logistic units with SSCC labels, but they are not in stock.

When scanning these SSCC's, the system will throw an error.

### **Solution**

The user needs to redo the receipt. The labels that have been printed by the system can be used to scan when creating the delivery.
