

# Licensing System

## 1. Requesting a License

Fill out all necessary fields on the license request page (the ones marked with \*) and add the products for which you need the license (there is an employee and a terminal version of all mobile products, you need to select the one that suits your needs best). You can request a Produmex license at our license request web page: <http://www.produmex.com/request-produmex-license-keys/>

ERP ▾ Warehousing ▾ Manufacturing ▾ Mobility ▾ Integration ▾ Industries ▾

### Request your Produmex license keys

Please complete the form below, in order to request one or more Produmex License Key(s).

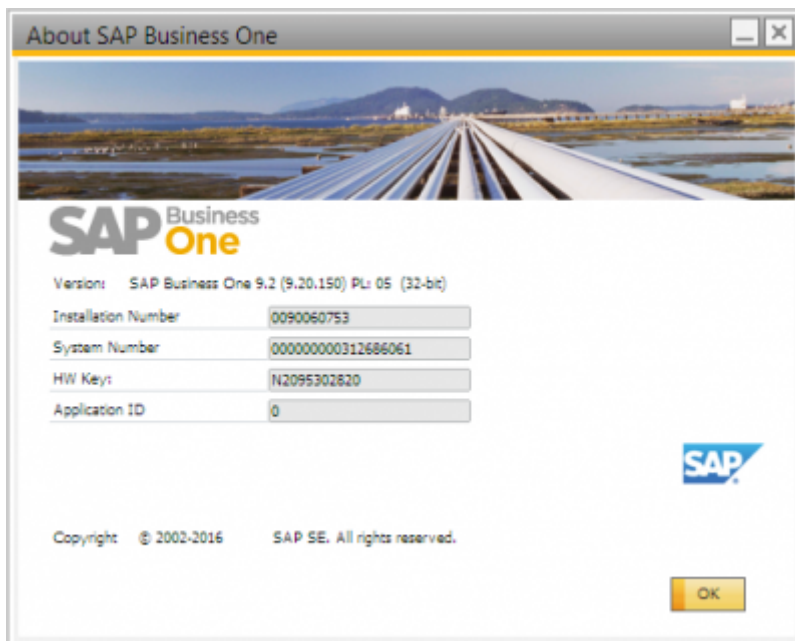

License data will be sent to the partner email address that is entered in the form.

Types of licenses:

- **New** — license for a new installation at a new customer
- **Production** — permanent license for a customer, valid for unlimited time for the purchased number of users
- **Extension of existing license** — additional user licenses for an existing installation
- **Customer demo** — for customer, valid for 60 days for any number of users
- **Partner license** — license for demo and testing purpose, valid for 1 year, for multiple users

<b>Partner *</b>	<b>Requester name *</b>	<b>Email address *</b>
<input type="text"/>	<input type="text"/>	<input type="text"/>
<b>Customer name *</b>	<b>Country *</b>	<b>City *</b>
<input type="text"/>	<input type="text"/>	<input type="text"/>
<b>Installation number *</b>	<b>System number *</b>	<b>Hardware Key *</b>
<input type="text"/>	<input type="text"/>	<input type="text"/>
<b>1st requested Add-on *</b>		
<input type="text" value="None"/> ▾		
<b>Additional comments</b>		
<div style="border: 1px solid #ccc; height: 80px;"></div>		

You have to fill in Partner name, e-mail address and customer name accordingly, then please gather all data about your SAP system: Installation Number, System Number, Hardware Key. These can be found in SAP Business One in the Help → About SAP Business One menu.

You can copy the numbers if you right click on the fields, and then you can paste them into the appropriate fields on the web page. Please note: all of them are needed for the license. Then you must set the add-on name, the license type and the requested quantity for the license. Note: you can request a license for 10 different add-ons at once. If you need more than that number, you must fill in two request forms. You must choose the following licenses for the following add-ons:

<b>Produmex Add-on name</b>
Produmex Manufacturing Professional* (formerly BX Core)
Produmex Manufacturing Limited* (formerly BX MTO)
Produmex PTM (formerly BX PTM)
Produmex PDC (formerly BX PDC)
Produmex Scan (formerly BX Mobile WH)
Produmex Operator (formerly BX Mobile Worker)

*\*For more information regarding the differences between the Produmex Manufacturing Professional and the Produmex Manufacturing Limited license, please see the [License Comparison Chart](#).*

The Requested Add-on type should always be Production if you request the license for a customer in a working environment. If you are a partner and need a license for presentation versions then you have to request a Demo for Presentation type license, which will be valid for one year. If you want to request a license for a customer so that he can try our add-ons, you have to request a Demo for Customer license, which will be valid for one month.

*Please note: Production licenses have no expiration date, but they are always billed to the customer/partner.*

If you have filled out your license request form, you have to click on Submit to send it. If the license was successfully sent. You will receive the Produmex license in an e-mail within 24 hours with a summary page showing the details of the licenses you requested.

*Please note: production licenses take some days to arrive. Demo licenses are sent right away to the requester.*

## Requesting License for Produmex Service Broker

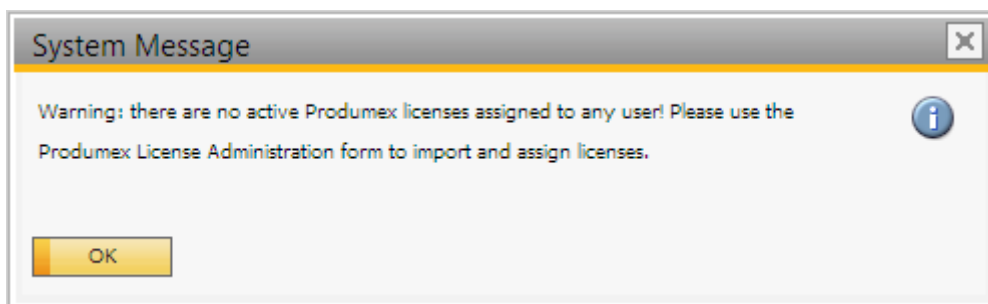

Produmex Service Broker has similar licensing model to SAP Business One, but instead of SAP users, licenses can be assigned to either:

- Employees
- Terminals (client computers)

Employee licenses can be assigned to specific employees who can use then the software from any computers. Terminal licenses can be assigned to computers which can be used then by any user.

## 2. Importing Licenses

After you have received your Produmex license in an email as a .zip attachment, save it in a directory and extract it. Then start SAP Business One and the add-on. If the add-on requires a license, during the start up, you will receive a message that no licenses are assigned:

To import and assign licenses you have to open the Produmex License Administration form:

- Tools > Produmex %add-on% > Produmex License Administration
- Administration module > Add-Ons > Produmex %add-on% > Produmex License Administration

where %add-on% is the name of your add-on. This form looks and works similarly to the SAP License Administration form.

In case of no add-ons bought, this option is replaced by the Produmex Control Panel standalone add-on, which looks and works the exact same way as License Administration. Install the Control Panel, run it from the Add-on Manager, then open the form via Tools > Produmex Control Panel > Licensing.

There are three kinds of licenses in Produmex:

- Add-on license: The add-on license can be allocated for a user on the 'Allocations' tab. *Please note: In the case of a control panel add-on no add-on license is needed.*
- Employee license: In the case of mobile applications the license can be assigned to an employee or a terminal. Allocate the license on the 'Employees' tab.
- Terminal license: To allocate the license for a terminal, go to the 'Terminal' tab.

## 3. Assigning Licenses

### 3.1. Add terminal license

In order to add license to a terminal it has to be registered in the add-on. A terminal can be registered with the following:

- automatically assigned device GUID
- IP Address (Please note: Using the IP address for registering the terminal is only recommended in the case of a static IP address)

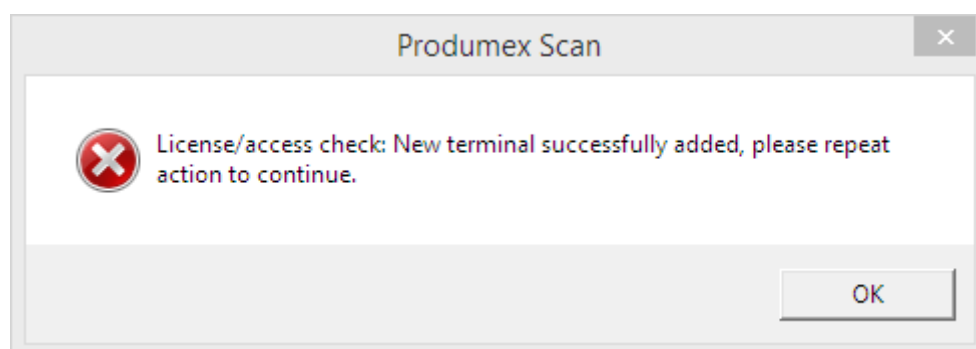

#### 3.1.1. Register the terminal with the device GUID automatically

To automatically register the terminal and assign a license for it, try to log in the application on the given terminal.

If the following verifies:

- The user/terminal currently has no Produmex license assigned
- There is a valid Produmex license installed
- There is at least one free Produmex terminal license that can be allocated for the new terminal

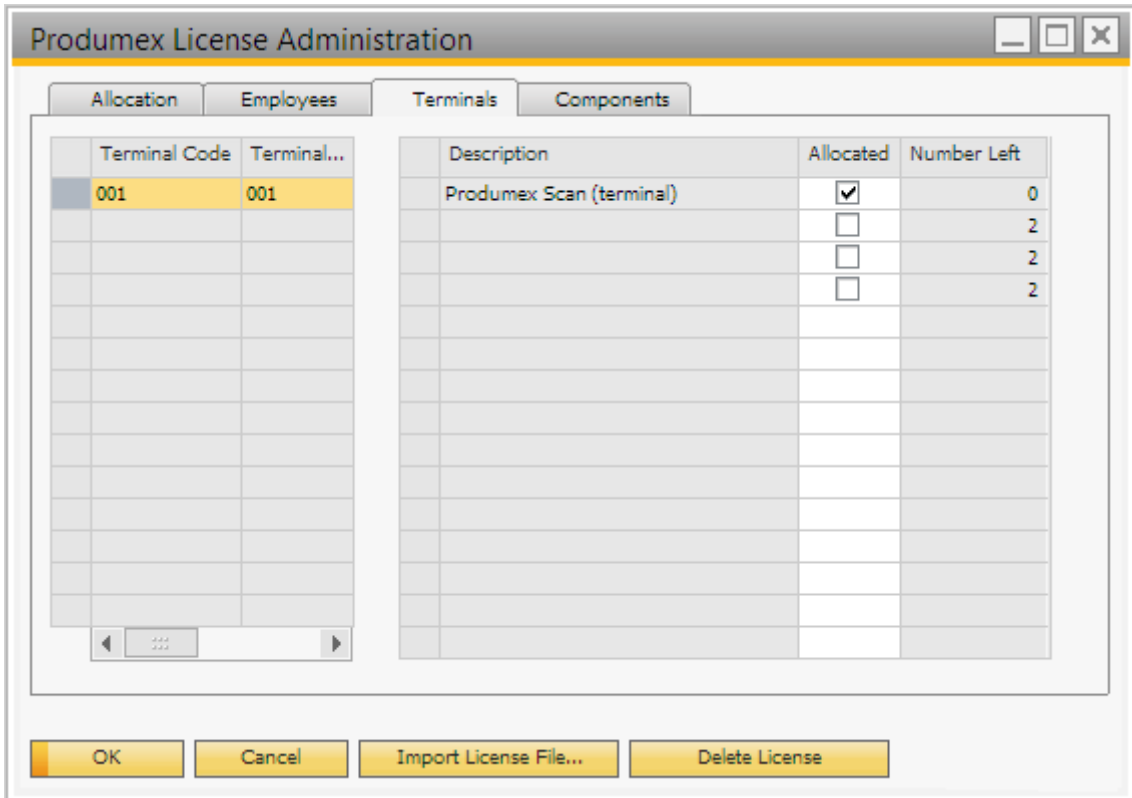

then the system will automatically record the terminal to the @BXPLICTER table and allocate a Produmex license to it when the user tries to log in. If any of the conditions is not verified, then no new row will be added to the @BXPLICTER table, and no license will be automatically assigned. A system message will open. Press 'Ok' then repeat the login.

When registering the terminal with the method described above, the hardware GUID will be added to the BXPLICTER table.

## 3.2. Modify terminal license

### 3.2.1. Update the list of available terminals

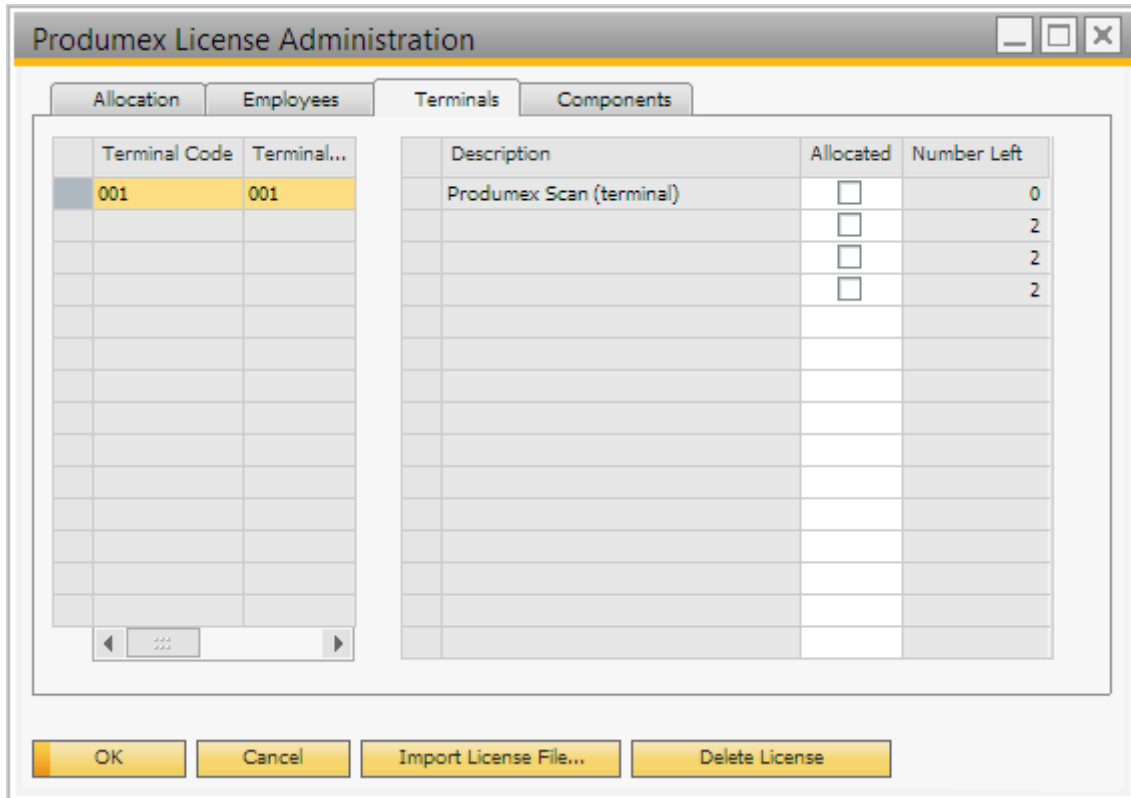

First check the available terminals on the License Terminals table. On this table terminals can be added, modified or removed. See: *3.1.2. Register the terminal with the IP address for more information about registering terminals manually*. To register a new terminal automatically, make sure that there is at least one available terminal license. Terminal licenses can be seen on the Terminal tab of Produmex License Administration form. Then follow as described in 1.1. Register the terminal with the device GUID automatically. Make sure that you log in with a user who does not have an employee license.

### 3.2.2. Modify terminal licenses

On the Produmex License Administration form terminal licenses can be modified. On the right grid of the Terminals tab every terminal license is listed. On the 'Number Left' column the number of the available licenses are displayed. It is not possible to allocate more license than the available licenses.

On the left grid select the terminal code. Every terminal defined on the License Terminals table is listed. To allocate a license for the terminal, tick the 'Allocated' box on the line of the corresponding license. To retract a license, untick the box.

Click on the 'Update' button and restart the Produmex Service Broker in order to apply manual license modifications.
